

# Euclid's Elements

## Book VII

### Definitions:

- 1 A unit is that by virtue of which each of the things that exist is called one
- 2 A number is a multitude composed of units. (not one)
- 3 A number is part of a number, the less of the greater, when it measures the greater
- 11 A prime number is that which is measured by a unit alone.
- 12 Numbers prime to one another are those which are measured by a unit alone as a common measure
- 15 A number is said to multiply a number when that which is multiplied is added to itself as many times as there are units in the other, and thus some number is produced.
- 20 Numbers are proportional when the first is the same multiple, or the same part, or the same parts, of the second that the third is of the fourth.

*As long as algebra and geometry have been separated, their progress have been slow and their uses limited; but when these two sciences have been united, they have lent each mutual forces, and have marched together towards perfection.*

**Joseph-Louis Lagrange**  
**(1736 to 1813)**

# Table of Contents, Chapter 7

1	Determine if two numbers are relatively prime	10	If $B = (p/q) \cdot A$ and $D = (p/q) \cdot C$ , and If $B = (r/s) \cdot D$ , then $A = (r/s) \cdot C$	21	If A,B are relatively prime, then A,B are the smallest whole numbers that can be used to describe the ratio A:B
2	Find the greatest common divisor for two numbers	11	If $A:B = C:D$ , then $(A-C):(B-D) = A:B$	22	If A,B are the smallest whole numbers that can be used to describe the ratio A:B, then A,B are relatively prime
3	Find the largest common divisor for three numbers	12	If $A:B = C:D$ , then $(A+C):(B+C) = A:B$	23	If A,B are relatively prime and if $A = n \cdot C$ , then B,C are relatively prime
4	Given two natural numbers, A and B, either B is part of A, or there exists a natural number (a part) that can measure both A and B	13	If $A:B = C:D$ , then $A:C = B:D$	24	If A,C are relatively prime and B,C are relatively prime then the $A \times B$ is relatively prime to C
5	If $B = (1/q) \cdot A$ and $D = (1/q) \cdot C$ , then $(B+D) = (1/q) \cdot (A+C)$	14	If $A:B = D:E$ and $B:C = E:F$ , then $A:C = D:F$	<b>25</b>	<b>If A,B are relatively prime then <math>A^2, B</math> are relatively prime</b>
6	If $B = (p/q) \cdot A$ and $D = (p/q) \cdot C$ , then $(B+D) = (p/q) \cdot (A+C)$	15	If $B = i \cdot 1$ and $E = i \cdot D$ , and if $D = j \cdot 1$ then $E = j \cdot B$	26	If A is relatively prime to C and D, and if B is also relatively prime to C and D, then $A \times B$ is relatively prime to $C \times D$
7	If $B = A/q$ and $D = C/q$ , $B > D$ , then $(B-D) = (A-C)/q$	16	$A \times B = B \times A$	27	If A,B are relatively prime, then $A^2, B^2$ are relatively prime, and $A^3, B^3$ are relatively prime, and so on
8	If $B = (p/q) \cdot A$ and $D = (p/q) \cdot C$ , $B > D$ , then $(B-D) = (p/q) \cdot (A-C)$	17	If $D = A \times B$ and $E = A \times C$ then $D:E = B:C$		
9	If $B = (1/q) \cdot A$ and $D = (1/q) \cdot C$ , and If $B = (r/s) \cdot D$ , then $A = (r/s) \cdot C$	18	If $D = B \times A$ and $E = C \times A$ then $D:E = B:C$		
		19	If $A:B = C:D$ then $A \times D = B \times C$ If $A \times D = B \times C$ then $A:B = C:D$		
		20	Given the ratio A:B and C,D are the smallest numbers such that $A:B = C:D$ then $A = n \cdot C$ and $B = n \cdot D$		

# Table of Contents, Chapter 7

- |    |  |    |   |
|----|--|----|---|
| 28 | If A,B are relatively prime, then A,(A+B) are relatively prime   | 37 | If $A = p \cdot B$ , then $A = q \cdot C$ where $C = p \cdot 1$       |
| 29 | If A is prime, and $B \neq n \cdot A$ , then A,B are relatively prime                                    | 38 | If $A = (1/c) \cdot B$ and $C = c \cdot 1$ then $A = n \cdot C$       |
| 30 | If $C = A \times B$ and $C = i \cdot D$ where D is prime, then either $A = j \cdot D$ or $B = j \cdot D$ | 39 | Find the smallest number that has the fractions $1/a$ , $1/b$ , $1/c$ |
| 31 | If $A = B \times C$ , then $A = j \cdot D$ where D is prime  |    |   |
| 32 | If A is a number then it is either prime, or $A = j \cdot D$ where D is prime                            |    |   |
| 33 | Find the smallest numbers X,Y,Z where the ratio X:Y:Z is equal to the given ratio A:B:C                  |    |   |
| 34 | Find the lowest common denominator of 2 numbers  |    |   |
| 35 | If E is the lowest common denominator of A,B, and if $C = n \cdot A = m \cdot B$ , then $C = i \cdot E$  |    |   |
| 36 | Find the least common multiple of 3 numbers  |    |   |

# Proposition 25 of Book VII

If two numbers be prime to any number, their product of one of them into itself will be prime to the remaining one

# Proposition 25 of Book VII

If two numbers be prime to any number, their product of one of them into itself will be prime to the remaining one

$$\gcd(A, B) = 1$$

$$C = A \times A$$

then

$$\gcd(C, B) = 1$$

## In other words

If A and B are relatively prime, then  $A^2$  will also be prime to B

# Proposition 25 of Book VII

If two numbers be prime to any number, their product of one of them into itself will be prime to the remaining one

$$\gcd(A,B) = 1$$
$$C = A \times A$$

## In other words

If A and B are relatively prime, then A<sup>2</sup> will also be prime to B

## Proof

# Proposition 25 of Book VII

If two numbers be prime to any number, their product of one of them into itself will be prime to the remaining one

$$\gcd(A,B) = 1$$

$$C = A \times A$$

$$D = A$$

## In other words

If A and B are relatively prime, then A<sup>2</sup> will also be prime to B

## Proof

Let D be equal to A

# Proposition 25 of Book VII

If two numbers be prime to any number, their product of one of them into itself will be prime to the remaining one

$$\gcd(A, B) = 1$$

$$C = A \times A$$

$$D = A$$

$$\gcd(D, B) = 1$$

## In other words

If A and B are relatively prime, then  $A^2$  will also be prime to B

## Proof

Let D be equal to A

Since A and B are relatively prime, and A equals D, then D and B are relatively prime

# Proposition 25 of Book VII

If two numbers be prime to any number, their product of one of them into itself will be prime to the remaining one

$$\gcd(A, B) = 1$$

$$C = A \times A$$

$$D = A$$

$$\gcd(D, B) = 1$$

$$\gcd(A \times D, B) = 1$$

## In other words

If A and B are relatively prime, then A<sup>2</sup> will also be prime to B

## Proof

Let D be equal to A

Since A and B are relatively prime, and A equals D, then D and B are relatively prime

A and D are both prime to B, thus the product of D and A will also be prime to B (VII·24)

# Proposition 25 of Book VII

If two numbers be prime to any number, their product of one of them into itself will be prime to the remaining one

$$\gcd(A, B) = 1$$

$$C = A \times A$$

$$D = A$$

$$\gcd(D, B) = 1$$

$$\gcd(A \times D, B) = 1$$

$$C = A \times D$$

## In other words

If A and B are relatively prime, then A<sup>2</sup> will also be prime to B

## Proof

Let D be equal to A

Since A and B are relatively prime, and A equals D, then D and B are relatively prime

A and D are both prime to B, thus the product of D and A will also be prime to B (VII·24)

But A times D equals C

# Proposition 25 of Book VII

If two numbers be prime to any number, their product of one of them into itself will be prime to the remaining one

$$\gcd(A, B) = 1$$
$$C = A \times A$$

$$D = A$$
$$\gcd(D, B) = 1$$
$$\gcd(A \times D, B) = 1$$
$$C = A \times D$$
$$\gcd(C, B) = 1$$

## In other words

If A and B are relatively prime, then A<sup>2</sup> will also be prime to B

## Proof

Let D be equal to A  
Since A and B are relatively prime, and A equals D, then D and B are relatively prime  
A and D are both prime to B, thus the product of D and A will also be prime to B (VII·24)  
But A times D equals C  
Therefore C is prime to B

# Proposition 25 of Book VII

If two numbers be prime to any number, their product of one of them into itself will be prime to the remaining one

$$\gcd(A, B) = 1$$
$$C = A \times A$$

$$D = A$$
$$\gcd(D, B) = 1$$
$$\gcd(A \times D, B) = 1$$
$$C = A \times D$$
$$\gcd(C, B) = 1$$

## In other words

If A and B are relatively prime, then A<sup>2</sup> will also be prime to B

## Proof

Let D be equal to A  
Since A and B are relatively prime, and A equals D, then D and B are relatively prime  
A and D are both prime to B, thus the product of D and A will also be prime to B (VII·24)  
But A times D equals C  
Therefore C is prime to B
